

SUCCESS

STARTS WITH
PREPARATION

**LET'S DO
IT WITH
BLANKSLATE!**

BECOME SOLUTION ARCHITECT IN 26 MONTHS AND EARN UPTO 200K!

WHAT WE OFFER!

Our course deals with product development with the help of cross functional programming expertise, the candidate has to cover whole stack of solutions e.g. data engineer, web development, app development, security expert, testing tools, awareness, scrum, devops and micro services. In this cycle the candidate will be capable enough for the role of solution Architecture.

For detailed information you will have to enroll in our seminar and acquire a prospectus where we have listed all the technologies and projects. We have listed the topics which are going to be covered each day from the start to end very comprehensively

Our immersive Program Ensures income from 200k to 400k per Month after completing our free two months prep class, only selected students will be enrolled in our complete bootcamp program which include more than 300 projects.

BIG IDEA

Let's take a look on old-school layered companies where you have a department of data science, cloud, operations, UI developers, IOT's, Artificial intelligence, QA engineers and so many others work from home to get consultancy from freelancers and solution architectures.

The problem is that the ticket and tasks are being thrown around by one team to another, and the real business goals are being water down along the way and not solved, in the end it costs high.

So, instead of this horizontal division, we are preparing an individual for a clear cut goal which they will achieve with emerging technologies and available API's/ cloud services with cross-skills and delivers in scrum and agile approach properly with continuous integration, deployment, testing and security, which makes you complete solution architecture.

1

E-COMMERCE

- Identifying Consumers
- Recommending products
- Analyzing reviews

2

BANKING

- Fraud Detection
- Credit risk modeling
- Customer lifetime value

3

FINANCE

- Customer segmentation
- Strategic decision making
- Algorithmic trading
- Risk analysis

4

MANUFACTURING

- Predicting potential problems
- Monitoring system
- Automating Manufacturing Units
- Maintaining scheduling
- Anomaly detection

5

HEALTH CARE

- Predicting potential problems
- Monitoring system
- Automating Manufacturing Units
- Maintaining scheduling
- Anomaly detection

6

TRANSPORT

- Medical image analysis
- Drug discovery
- Bioinformatics
- Virtual Assistants

WHY THIS BOOTCAMP?

We live in a fast-paced society. Everything we do is accelerated, and can modify at a moment's notice. This change is prominent in the tech industry, where new designs and technologies are emerging into the marketplace.

This boot camp will not only help students to get deep understanding of the industry but also graduate with a portfolio of real-world projects which they've made.

They will be doing projects, challenges, capstone projects, assignments and workshops. All of it will be done in pair programming.

WE WILL NOT TEACH YOU HOW TO CODE,
WE WILL TEACH YOU HOW TO LEARN AND
HOW TO THINK LIKE A PROGRAMMER.

If you put in the dedication, you'll succeed, but you shouldn't be blind to the amount of work that a bootcamp is accompanied by. It's not easy. Bootcamps are designed to teach you multiple years' worth of skills in a matter of months. It takes a certain mindset and level of commitment to come out on top.

IF YOU NEED A PROFESSIONAL REBOOT OR
YOU'RE AT A CROSSROADS AND LOOKING FOR
PUSH ITS TIME TO LEVEL UP WITH
LETS DO IT BOOTCAMP!

WHAT IN IT!

The curriculum for Bootcamp Prep includes lectures, workshops, pair programming, coding challenges, and a capstone project—many of the same elements you'll find in our immersive program, which is why Bootcamp Prep is great practice for ultimately enrolling in a coding bootcamp.

Bootcamp Prep courses (especially Prep in 60 Days) are demanding and intense. They are for true beginners (anyone who has never written any code before), and we recommend it to only those who are actually considering attending a coding bootcamp.

COSTING MATRICES FOR 30 STUDENTS

SOLUTION ARCHITECTURE (300K PER MONTH)	20K ON EACH STUDENT (TWO MONTHS)
SENIOR DEVELOPER (100K PER MONTH)	07K ON EACH STUDENT (TWO MONTHS)
FULL STACK DEVELOPER (50K PER MONTH X10=500K)	33K ON EACH STUDENT (TWO MONTHS)

So according to above matrices we have to spend 60 Thousand on each Student because we need a Solution Architecture who will lead the whole class, one senior developer for projects and one full stack developer for every three students for their assistance and pair programming.

- 1000 HOURS
- 1000 CHALLENGES
- 50 PROJECTS
- INDUSTRIAL EXPOSURE

But amazingly we're offering this 1000 hours prep class which includes 1000 challenges and 50 Projects absolutely for **FREE**.

THIS IS HAPPENING FOR THE **FIRST** TIME IN THE HISTORY OF **PAKISTAN**.

Our immersive Program Ensures income from **200k** to **400k** per Month after completing our free two months prep class, only selected students will be enrolled in our complete bootcamp program which include more than **300** projects

PROJECTS

WHAT WE COVER IN IT!

@keyframes, Animation and Transition, Cascade, Specificity, Inheritance, Component Based Strategy Writing Reusable Code, Huge Projects with Flexbox, Huge Projects with CSS Grid, Sass Global Variables, Managing Media Queries, Mobile First vs Desktop First, NPM ecosystem Faster Page Load Responsive Images, Videos in HTML and SVG Images for Background Effect Bootstrap 5 include Typography, Tables, Forms, Buttons, Glyph icons, Dropdowns, Buttons and Input Groups, Navigation, Pagination, Labels and Badges, Alerts, Progress Bars.

- 1** 40 Layouts with the help of Pair Programme
- 2** 500 Challenges with the help of Pair Programme
- 3** 15 Hands on Projects in Bootcamp Class (60 x 10) 600 Hours
- 4** 20 Assignments Projects with the help of Pair Programme (20 x 11) 220 Hours
- 5** 15 Capstone Projects with the Help of Professionals (60 x 3) 180 Hours
